**ALL YOU NEED TO KNOW**

## **IPHONE - IPAD - IMAC**

Smartphones these days are not mere communication devices, what they've turned into is an all-in-one solution for business. Email, Internet, managing personal information, creating & manipulating documents, spreadsheets, presentations on the go, digital photography, sat navs and so much more. As a music device with the ability to store up to 25,000 songs the iPhone is a unique handset.

The iPhone has now become a portable office as people demand more and more from smartphones. Apple has focused a lot of attention on App development, this is what makes the iPhone stand apart from the rest, with over 750,000 Apps available like they say in the ad "there's an App for that".

The iPad is leading the way in helping businesses manage information, people, projects and marketing.

The Apple eco system lends itself to integration, it's not just the iPhone, it's the iPad the iMac, do something on one device and it pops up on them all!

But like any high tech device it's all about knowing how to get the most out of it!

That's where we can help, be it for personal or business use, get the most out of your device. After investing in the devices invest in training.
